

UNIVERGE® SV8000 Series IP DECT Terminals

Fulfilling the promise of UNIVERGE®360

Organizations are starting to realize the value of communications and business applications coming together to make users more productive and mobile. As a key part of NEC's UNIVERGE®360 approach, NEC demonstrates this value by placing employees at the center of communications and providing mobility options based upon the needs of the individual worker.

UNIVERGE IP DECT Terminals meet those needs by combining the benefits of IP telephony with the superior quality and features of DECT technology. This IP-based wireless system provides perfect voice quality, seamless handover between access points and a secure air interface that protects your company's investments in existing telephones, applications and the network infrastructure.

Its wireless handset, the C124 DECT, is designed to work seamlessly with the IP DECT terminal. Its intuitive, ergonomic design provides excellent sound quality, numerous features and optimal comfort. Powerful encryption techniques ensure secure communication, and advanced call-logging features make incoming call management easy.

With IP DECT terminals and the C124 DECT handset, users may never lose another call.

At a Glance

- Improve customer satisfaction
- Increase productivity
- Reduce communications costs
- Select a simple, secure, feature-rich solution

Improve Customer Satisfaction

Giving callers quick access to your employees without making them jump through hoops improves customer satisfaction rates. And with the mobility features that IP DECT terminals provide, employees can always be reached – even when they are away from their desks. This increased availability lets your customers reach employees directly – without making them deal with operators or voicemail. Calls are answered more quickly and efficiently.

Increase Productivity

IP DECT Terminals can increase the productivity of almost any organization. By giving your employees the ability to access communications features while they are away from their desks, you enable them to complete multiple tasks simultaneously. And because your employees can answer calls directly, reception workers and administrative assistants are free to complete other work.

Reduce Communications Costs

These terminals provide the optimal approach for flexible businesses. A single converged network can be used to provide both fixed and wireless telephony and reduce dedicated cabling requirements. Move, add and change costs in addition to cabling expenditures are reduced. Because most calls can be answered immediately, callback charges are minimized. Additionally, no internal call costs are associated with IP DECT Terminals.

Select a Simple, Secure, Feature-Rich Solution

With IP DECT, your data and network are secure. All communications are encrypted to protect privacy concerns for both you and your customers.

The simple installation of the IP DECT solution provides another benefit. Connect DECT Access Points (multi-directional radio base stations) directly to the LAN, and then set up IP DECT at remote locations. Depending upon building characteristics, each DECT Access Point can provide coverage over a wide area and enable users to move around freely.

IP DECT also provides feature transparency on NEC platforms as well as standard SIP functionality. With all of these features, IP DECT Terminals can make your business stand out in the crowd.

C124 DECT Wireless Handsets

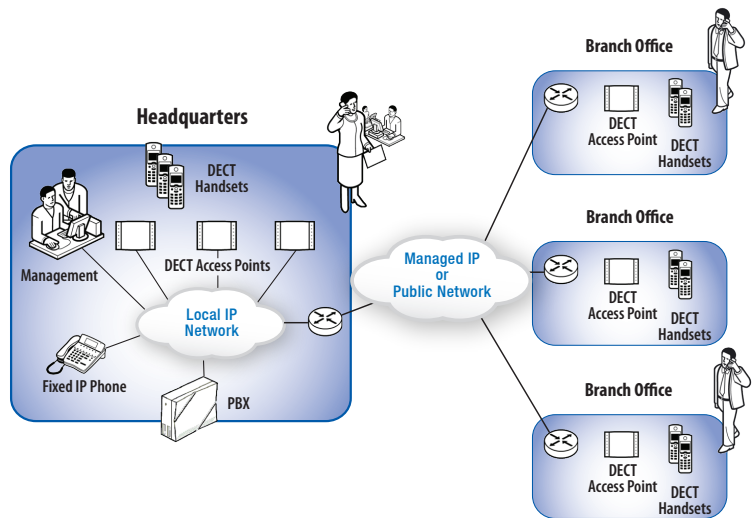

The C124 DECT is a compact, ergonomically designed wireless business handset that works with the IP DECT terminal. It provides optimal comfort and numerous features, such as:

- An illuminated graphic LCD display to facilitate use in poorly lit environments
- An internal loudspeaker that provides hands-free operation with excellent sound quality
- Powerful encryption techniques to ensure secure communication
- Advanced call-logging features that simplify incoming call management

Adding Wireless Telephony to IP Networks

Wireless Telephony for Remote and Local Offices

C124 DECT Wireless Handset Features

Handset Features:	
• GAP-compatible	• Adjustable ringer volume
• Call reject	• Personal phone book
